

CHESTNUT CHAT SERIES:
CHAT 26: EMERGING AND EVOLVING THREATS TO CHESTNUT GROWTH
DATE: FRIDAY, JULY 16, 2021

ORIGINATOR	QUESTION / COMMENT
Mark Double	Andrea Vannini showed us Gnomoniopsis in northern Italy back in 2013. As Emily showed, the cankers on <i>C. sativa</i> had dark brown/black cankers. In addition, the fungus also was visible on leaves and petioles.
Mike Aucott	I've seen these galls on a surviving American chestnut in Mercer County Park, near Trenton NJ.
